CHERRY MAE L. REYES
Schools Division Superintendent
Malaybalay City
malaybalay.city@deped.gov.ph

Dear:

Greetings!

Life-long skills are proving to be more important in the learning recovery of our youth. The best way to learn it however may also be outside the four corners of our classroom. Skills, after all, take practice to master. In the application of our language learning, we go to campus journalism for instance. And what better method to learn it but through the **21st Word Cup National Journalism Conference and Ambassadors Award** on 4-5 May 2024 at Tagaytay City.

We believe that our authentic journalism workshops are effective ways to impart life-long learning in journalism. For instance, months before the pandemic in July, we provided 270 Word Cup Masterclass participants an actual news coverage by having them work side by side with media professionals in the live coverage of **seven events**, namely: the *Asian Obstacle Course Racing Championships* back to back with the *ASEAN Para Obstacle Course Racing Championships* at the Quirino Grandstand and the *National Milo Marathon* at the Mall of Asia; the *Pencak Silat demonstration* at Bayview Park Hotel; the press briefings on: *Toward a Livable City: Balancing Environment and Development in the Metropolis* held in Las Pinas-Paranaque Critical Habitat and Ecotourism Area; *The Philippine Cinema's Centennial: Quo Vadis?* and the *Philippines Global Initiative to Decongest Cities* in GSIS.

Thus in August, Manila Bulletin published Word Cup participants' coverage of the Las Pinas Paranaque Critical Habitat and Ecotourism Area. Months prior, on May 30 the newspaper also featured the Boracay rehabilitation. These were your students and teachers embracing life-long learning as a method to reinforce their classroom learning.

In these Masterclasses, in-depth training was delivered by the practitioners themselves. In addition to learning by doing, we ensure that we give feedback to the work of our participants through the insightful critiquing of their outputs. To push them to do more, we bundled a national level contest or learning evaluation as incentive to the activity. As learning leaders, we hope that you too have recognized the uniqueness of our method by allowing your students and teachers to experience the only authentic journalism training workshop in the Philippines and Asia by **issuing a Memorandum or an Advisory cascading the event** chargeable to their school MOOE or Local School Board fund subject to the usual accounting rules and regulations.

We look forward to your favorable accommodation of this request. For further inquiries, I may be reached through wordcup@edcalibre.com or at mobile number 0915.960.7268. You can know more about us on our Facebook account Word Cup Associated Editors.

Thank you and more power!

EUGENIO SONNY O. CALAPIT, Ed.D., EnP

21st Word Cup National Journalism Conference and Ambassadors Awards

Matrix of Activities

4 May 2024 (Saturday)

| | | | |
|----------------------------|---|---|---|
| 7:30-9:00 | Arrival and Registration | | |
| 9:00-10:30 | Opening Program/ Press Briefing and Press Conference | | |
| 10:30 – 12:30 | News Writing / Pagsulat ng Balita | Feature Writing / Pagsulat ng Lathalain | Editorial Writing / Pagsulat ng Pang-ulong Tudling |
| 2:00 – 4:30 | Mobile Journalism | Sports Writing / Pagsulat ng Balitang Isport | Copyreading & Headline Writing / Pag-uulo at Pagwawasto ng Balita |

Climate action now

...reversing global temperatures. Rising sea levels. Melting ice sheets. Smoggy forest fires. The signs of an environmental crisis called climate change are around us and its effects create a colossal impact that continues to rock the ecological system and disrupt the lives of millions.

Climate and behavioral modifications assist that climate change either in a more drastic to the advancement of urban hubs that would improve the quality of life, raise income levels, and develop business activities.

However, despite the trials of industrial development, which put sustainability practices in its development which further worsens the damage caused by climate change.

For instance, a 2017 United Nations report concluded that the world's business and industry are not doing enough to address climate change, especially in major regions. In fact, it would be difficult to combat without immediate and sustained industrial action.

In addition, a 2017 report from PANGLOSS revealed that there will be an increase in several metropolitan areas with the development of smart cities driven by increased carbon dioxide and other human-made emissions.

“Come together because your future is at risk. If we take action now, we can work together toward ensuring that our future and the future of the next generation will be safe.”

“Collectively find climate around the world.”
The common goal against climate change is to reduce greenhouse gas emissions that would cause the ecological sustainability. Reduction of the environment - civic groups, the government, and all of us - should put resources toward preventing climate yet despite ways to address climate change as outlined in the National Power and Energy Commission's Climate Change.

It is time for everyone to answer the call of environmental action. Let us take a look at the words of United Nations Secretary-General António Guterres, who said: “There is no time to lose. We must act now. We must act together. We must act now. We must act together. We must act now. We must act together.”

Just as, in a DENR student of the College de San Agustin Computer in Marikina, City

EDITOR'S NOTE

...the Manila Bulletin. The Manila Bulletin is a leading news outlet in the Philippines. It is committed to providing accurate and timely news coverage on a wide range of topics, including environment and climate change.

No one is spared

By **ARMANDO S. DOMINICO**

Climate change is inevitable to ignore. It is no longer an abstract concept of the future. We feel it now. We see it now. With urgency, we are now doing tangible actions to act now with effects on combating climate change on a global scale.

A lot of people say they are aware about climate change, but they don't act. Actually, only a few are doing it. With overwhelming scientific evidence, reports, and data revealing extreme weather, record-breaking temperatures, melting glaciers, we need to put our own shoulders to the work of nature. What, perhaps, not everyone especially in the case of the Philippines.

According to United Nations Secretary-General António Guterres, who said: “There is no time to lose. We must act now. We must act together. We must act now. We must act together.”

“Climate change is inevitable to ignore. It is no longer an abstract concept of the future. We feel it now. We see it now.”

The Philippines has committed to cut greenhouse gas emissions by 70 percent by 2030.

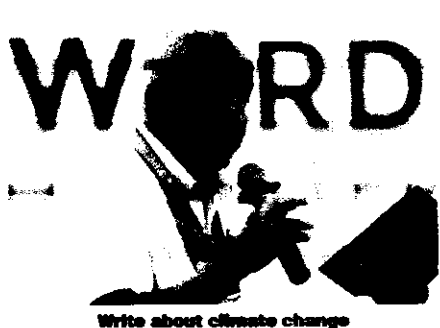

The commitment is being implemented through various campaigns using all media platforms, seminars, and lobbying on the effects of climate change, and to also raise things which can be done to deal with this issue,” he said.

Domestic also suggest with certainty that the issues need to be addressed in bigger perspective to gain global attention. Climate change must be given top priority attention, more than anything else.

Without doubt, the issue now is beyond the use of fossil fuel, industrial revolution, levels of carbon dioxide, not least trapping greenhouse-gas temperatures. The required action includes beyond the pillars of forests, building, road, water, power, and water supplies, including.

It is about finding tangible and sustainable mechanisms to stop the damage. We need to act together as one. We need to do it now - better and faster - because no one is spared. Remember, we can fight climate change. We are the world's greatest resource.

Domestic has 30 years of experience in advising school papers. He is currently teaching at Roosevelt National Comprehensive High School.

Dr. Orlynn C. Masig, author and editor-in-chief of the Manila Bulletin, speaks to participants, members of campus journalism and school papers, how to report on climate change at the talk, 'Changing Nature: Subscribers in the Climate Change' held during the 20th Word Cup in Manila. (Photo by Armand S. Dominico)

Take the first step

...national and international interventions have been proven to be ineffective in curbing the devastating effects of climate change.

Climate change has been a recurrent topic that it has already become a staple on newspapers and campus publications. And most of them are often in one form - the “green” genre.

There are not all the boats when it comes to climate change. It's an inherent fact that we are at high level.

This is not a matter of judging who is to blame. It's a matter of do, don't, or die.

In the end, climate change remains a global issue with local, national, and international dimensions. Many governments are still in the “green” genre in combating climate change.

“Be involved, take it as an issue, and write in publications,” Masig said.

Actions speak louder than words. It is an action that has continued to prove that it is not just talk.

Students should take part in offering and curbing climate change, and curbing climate change.

It is never enough to prepare on the case of all climate.

Words are empty if not coupled with the right action.

At Dr. Martin Luther King, Jr. once said, “Take the first step in faith. You don't have to see the whole staircase, just take the first step.”

We already know what needs to be done. We have to act now and save the planet. Take the first step.

No classes, yehey?

By **JAVIER R. WILLAMSON**

It has been two months into the academic year, yet students have already missed a lot of classes due to frequent class suspensions. On the third week of September alone, out of the five school days, students in Cavite have only attended their classes once, since their Monday, Tuesday, Thursday and Friday classes have been suspended due to turbulent weather brought about by typhoon Nona.

Meanwhile, given an online mode, most in-state have missed classes due to their general suspension. A lot of students are still waiting for their suspension to be lifted.

However, the suspended classes seem to be just a glimpse of a bigger picture. Dr. Orlynn Masig, a columnist and publisher of Manila Bulletin, who underscored Masig's point. Typically, the Philippines experiences about 20 typhoons a year. Though the typhoons visiting the archipelago have increased in

number, they became stronger in intensity.

“Typhoons are strengthened and there are more of them because of warmer oceans,” said Masig.

Public lamented that local government officials are increasingly caught off guard by these changes but this has happened through time, especially now that they are now in the middle of the school year.

These changes are not the only cause of climate change. However, students are not the only ones affected.

“Remember that the suspension to school suspension,” said Masig. “It's the suspension that forces climate change to be not only an “climate crisis” but more as a “climate catastrophe.”

“It's not just a suspension,” he said. “It's a suspension that has become a threat to the survival of our,” said Masig.

The next time students hope for class suspension, may they be reminded of the bigger picture that all of us are facing. There is more to it than just being a day off from class.

Willamson, 26, is a communication arts student from Laguna of the Philippines College.

Learn what PH is doing vs. climate change

Participants at the 20th Word Cup express their concerns about the Climate Change Commission's report that the Philippines needs to cut greenhouse gas emissions by 70 percent by 2030. The report also calls for a 20 percent reduction in greenhouse gas emissions by 2025. The report also calls for a 20 percent reduction in greenhouse gas emissions by 2025. The report also calls for a 20 percent reduction in greenhouse gas emissions by 2025.

Boracay RENAISSANCE

A year after its closure, what now?

The island of Boracay, a small, crescent-shaped island in the Philippines, has been closed to tourists for a year. The closure was a result of the island's severe environmental degradation, particularly its beaches, which were once world-famous for their white sand and clear blue water. The island's tourism industry, which is the main source of income for the local population, has been severely impacted. The closure has led to a significant loss of jobs and income for many of the island's residents. However, the closure has also provided an opportunity for the island to undergo a major renovation. The local government and various environmental groups have been working to clean up the island and restore its natural beauty. This includes removing illegal structures, planting trees, and improving waste management. The island's closure has also led to a re-evaluation of the Philippines' tourism industry. It has highlighted the need for sustainable tourism practices that protect the environment while still allowing for economic growth. The island's renaissance is a testament to the power of community action and the importance of environmental protection.

BE HUMANS, NOT PLASTIC

More than 100,000 tons of plastic waste are dumped in the Philippines every year. The waste is mostly from the island of Boracay, which is a popular tourist destination. The waste is dumped in the island's forests, which are home to many rare and endangered species. The waste is also dumped in the island's beaches, which are once again becoming polluted. The waste is a major problem for the island's environment and its residents. The waste is a major source of pollution and is a major cause of the island's environmental degradation. The waste is also a major source of health problems for the island's residents. The waste is a major problem for the island's environment and its residents. The waste is a major source of pollution and is a major cause of the island's environmental degradation. The waste is also a major source of health problems for the island's residents.

A worker is seen collecting plastic waste from the island of Boracay. The waste is mostly from the island's tourism industry, which is the main source of income for the local population.

Restoring the positive effects of the closure of Boracay entails a joint effort with the residents and local government. This can be done by following the set of rules, by being a responsible tourist, and by helping against the positive effects of sustainable tourism.

A community meeting is held on the island of Boracay to discuss the island's environmental problems and to find ways to solve them.

A community meeting is held on the island of Boracay to discuss the island's environmental problems and to find ways to solve them.

DESERVING BORACAY

If you are a tourist, you should be responsible. You should not litter. You should not drink and drive. You should not use illegal drugs. You should not engage in illegal activities. You should not disrespect the local culture. You should not disrespect the local environment. You should not disrespect the local people. You should not disrespect the local government. You should not disrespect the local laws. You should not disrespect the local customs. You should not disrespect the local traditions. You should not disrespect the local heritage. You should not disrespect the local identity. You should not disrespect the local pride. You should not disrespect the local honor. You should not disrespect the local dignity. You should not disrespect the local respect. You should not disrespect the local honor. You should not disrespect the local dignity. You should not disrespect the local respect.

CHALLENGING ENHANCEMENT

A major challenge in the Philippines is the lack of sustainable tourism. The tourism industry is the main source of income for the local population, but it is also a major cause of environmental degradation. The tourism industry is a major source of pollution and is a major cause of the island's environmental degradation. The tourism industry is also a major source of health problems for the island's residents. The tourism industry is a major problem for the island's environment and its residents. The tourism industry is a major source of pollution and is a major cause of the island's environmental degradation. The tourism industry is also a major source of health problems for the island's residents.

SUSTAINING PARADISE

A major challenge in the Philippines is the lack of sustainable tourism. The tourism industry is the main source of income for the local population, but it is also a major cause of environmental degradation. The tourism industry is a major source of pollution and is a major cause of the island's environmental degradation. The tourism industry is also a major source of health problems for the island's residents. The tourism industry is a major problem for the island's environment and its residents.
